Computer Science And Engineering Department

Academic Year 1447- 1448 / 2025- 2026

Second Semester

Assignment 1

CS381

Web Application Development

Date:	**3/4/2026**	**Time Allowed:**	0 Hours: 00 (2 weeks)

Student Name: Shahad Ahmed Alalwni **ID Number:** 441500444

Teacher's Name: _____ **Section:** 1

Please read the following instructions carefully:

- Write your name, I.D. number and section number in the space provided above.
- Read each question carefully before answering.
- Answer all questions.
- Support materials are not allowed in the examination Hall except those provided by instructor.
- Do not use digital or printed dictionary.
- Do not use pencils for answering except for drawing.

For Instructor Use Only

CLO.	Part No.	Mark Assigned	Mark Attained

Personal Academic Portfolio with Responsive Layout & Accessibility

Preamble

Students will design and implement a fully responsive, semantic, and accessible personal academic portfolio website using only HTML5 and custom CSS3 styling (no Bootstrap, no templates, no generators).

Requirements

- No CSS frameworks (Bootstrap, Tailwind, etc.)
- No copied templates
- No JavaScript
- Must use semantic HTML5
- Must implement mobile-first design
- Must demonstrate Flexbox AND CSS Grid
- Good accessibility consideration

Functional Requirements

Required Content (Must use YOUR real information)

Element	Requirement
Profile Photo	A photo of YOURSELF (not avatar/cartoon). Use placeholder if privacy concern, but filename must include your student ID: `photo_XXXXX.jpg`
Full Name	Your full name as registered in college
Student ID	Your actual student ID number
Major	Your major (e.g., Computer Science)
Personal Portfolio	Detail CV of yourself
3 Interests/Hobbies	Three of YOUR personal hobbies or interests
Favorite Quote	A quote that YOU find meaningful (include who said it)
Learning goals	Write a short paragraph about your goals in learning web development
Contact Email	Your YIC email address

Organize the content into at least 3 separate pages (such as index, profiles and contact)

Deliverables

- Wireframe sketch (hand-drawn or Figma)
- HTML + CSS source code
- 1-page design explanation (PDF)

Submission

- Codes and report must be submitted as a git repository in GitHub
- You submit the assignment by sharing the repository cloning link in Blackboard

Grading Rubric (Out of 100 Points)

Criteria	Marks
Semantic HTML	20
Layout & Responsiveness	25
Personalization	20
Design	15
Accessibility	10
Effective use of GitHub repository	10
Total	100

Design Explanation

The system is built using a **CSS Grid-first approach**, prioritizing a strict separation between content structure (HTML5) and visual presentation (CSS3). This design ensures high maintainability, precise spatial control, and a professional aesthetic suitable for a technical showcase.

1. Core Layout Logic: The 3-Tier Grid System

The website utilizes a sophisticated **Grid Wrapper** that governs the entire viewport. By defining a master container with display: grid, the layout is divided into three distinct functional zones:

- **The Global Header:** An automated row that stays consistent across all pages, housing the primary navigation and identity.
- **The Dynamic Main Body:** A flexible row defined with 1fr (one fraction unit), allowing the central content to expand and fill all available vertical space.
- **The Global Footer:** A fixed-height row providing a clean closing to the visual frame.

2. Spatial Distribution and Modular Components

Within the main body, the design employs specialized sub-grids to organize diverse information types without clutter:

- **Symmetrical Information Grids:** In the info.html view, a three-column layout (repeat(3, 1fr)) is used to distribute student data, interests, and goals with equal visual weight.
- **Card-Based Project Grids:** The projects.html view uses a two-column grid system. This creates distinct "containers" for technical projects, allowing for structured lists of requirements engineering, testing protocols, and core features to be read clearly.
- **Asymmetrical Contact Layouts:** The contact.html page uses a 40/60 split, providing an efficient balance between static contact information and interactive form elements.

3. Visual Standards and Accessibility

The UI is built on a foundation of clarity and high-contrast accessibility:

- **Color Theory:** The palette uses a soft beige (#F5F5DC) paired with a deep slate (#3e445b). This combination reduces eye strain while maintaining a sophisticated, academic tone.
- **Typographic Hierarchy:** The design pairs **Georgia** (a legible serif font) for high-level headers with **Verdana** (a clean sans-serif) for body text. This distinction ensures that technical documentation remains readable even at smaller font sizes.
- **Semantic Integrity:** Every structural element uses semantic HTML5 tags (e.g., <nav>, <main>, <section>). This choice directly supports web accessibility standards, ensuring the site is navigable by screen readers and optimized for search engines
